CBU-ASR is a Bluetooth controllable, Casambi enabled two channel 0-10V controller for dimmable LED loads and luminaires. It is powered by an external 12-24 VDC Class 2 power supply.

CBU-ASR can control two channels making it an ideal partner for tunable white (TW) applications. The two channels can be configured also to operate individually. The device also has a control port for an external relay and a sensor input.

CBU-ASR is an ideal partner for power packs with line voltage relays. CBU-ASR is protected against overvoltage, overcurrent and short circuit situations.

CBU-PWM4 can be controlled with Casambi app which can be downloaded free of charge from Apple App Store and Google Play Store.

Different Casambi enabled products can be used from a simple one luminaire direct control to a complete and full featured light control system where up to 127 units form automatically an intelligent mesh network.

**Wiring diagram**

**Input**
- Voltage range: 12-24 VDC, Class 2
- No-load input current: 30 mA

**0-10V output (2 channels)**
- Output voltage: 0-10 VDC, adjustable
- Max. output current: 5 mA, sinking and sourcing

**Relay control output**
- Output voltage: 12-24 VDC, same as input
- Max. output current: 100 mA

**Sensor input**
- Input voltage: Max. 24 VDC
- Input resistance: 81.5 kΩ

**Radio transceiver**
- Operating frequencies: 2.401-2.483 Ghz
- Maximum output power: typ. +0 dBm, +/-3dBm

**Operating conditions**
- Ambient temperature, ta: -13°F...+113°F (-25...+45°C)
- Max. case temperature, tc: +167°F (+75°C)
- Storage temperature: -13°F...+167°F (-25...+75°C)
- Max. relative humidity: 0...80%, non-cond.

**Connectors**
- Wire range, solid & stranded: 0.5 - 1.5 mm²
- 14 - 22 AWG
- Wire strip length: 25” (6 - 7 mm)
- Tightening force: 0.4 Nm / 2.6 Lb-in

**Technical data**

**Mechanical data**
- Dimensions: 2.2 x 1.2 x 0.7 inch
- Weight: 0.8 oz (23 g)
- FCC ID: 2ALA3-CBUASR
- IC: 22496-CBUASR
- UL: UL Listed
  - UL Plenum Rated (UL 2043)

Compatible devices:
- iPhone 4S or later
- iPad 3 or later
- iPod Touch 5th gen or later
- Android 4.4 or later devices produced after 2013 with full BT 4.0 support
Installation
CBU-ASR is a UL Listed Open-Type device which means that it will have to be used together with a Class 2 power supply with maximum output power of 100 VA. The product can be installed outside of a junction box. Make sure to comply with National Electric Code in installation and when selecting installation wires.

The products has one return line which is shared between the two 0-10V outputs, relay control output and sensor input.

The two 0-10V outputs can be configured for different functions, such as 2 channel tunable white, or 1-2 jointly and individually dimmable channels. The standard configuration when delivered is 2 channel dimming, but the configuration can be changed by the end user from Casambi App.

CBU-ASR, as any other Casambi product, should not be placed in a metal enclosure, such as metal junction boxes. Metal will attenuate radio signals which are crucial to the operation of the product. If the product will have to be installed into a junction box, make sure to use a plastic junction box.

Range
The range between two CBU-ASR units or between a CBU-ASR and a smart phone can vary a lot depending on obstacles and surrounding material. In open air the range between two CBU-ASRs can be in excess of 200 ft, but if the unit is encapsulated into a metal structure, the range can be only few feet. Therefore, thorough testing is highly suggested.

Casambi uses mesh network technology so each CBU-ASR acts also as a repeater. When testing the network, it is important to test that each unit can be controlled from any point of the network covered area.

Compliance Statement
This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions:

(1) This device may not cause harmful interference, and
(2) this device must accept any interference received, including interference that may cause undesired operation.

FCC Interference Statement
This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation.

This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications.

However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one of the following measures:

• Reorient or relocate the receiving antenna.
• Increase the separation between the equipment and receiver.
• Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
• Consult the dealer or an experienced radio/TV technician for help.

Radiation Exposure Statement for FCC
This device complies with Industry Canada’s licence-exempt RSSs. Operation is subject to the following two conditions:

(1) This device may not cause interference
(2) This device must accept any interference, including interference that may cause undesired operation of the device.

This equipment is exempt from the routine RF exposure evaluation requirements of RSS-102. This equipment should be installed and operated with a minimum distance of 20 cm between the antenna and the user or bystanders.

Le présent appareil est conforme aux CNR d’Industrie Canada applicables aux appareils radio exempts de licence. L’exploitation est autorisée aux deux conditions suivantes:

(1) l’appareil ne doit pas produire de brouillage;
(2) l’utilisateur de l’appareil doit accepter tout brouillage radioélectrique subi, même si le brouillage est susceptible d’en compromettre le fonctionnement.

Ce matériel n’est pas sujet à l’évaluation habituelle d’exposition RF selon RSS102. Ce matériel devrait être installé et exploité en gardant une distance minimale de 20 cm entre l’antenne et l’utilisateur ou les spectateurs.
