← Sample entry for two sections of K-RANGE 24 Tape Light, 22 in. lengths, each with a 24 in. wire lead.

* Due to variations in the tape light manufacturing process, Custom Finished Tape Light can vary up to +/- one cut point section.
** Please refer to the voltage drop chart on the other side of this sheet.

**CUSTOM JUMPERS, CCT, OR CRI:**
For a quote for series configurations of multiple tape light sections connected with jumpers, or for custom CCT or CRI, please call the Specifications and Quotes department at 877.817.6028.

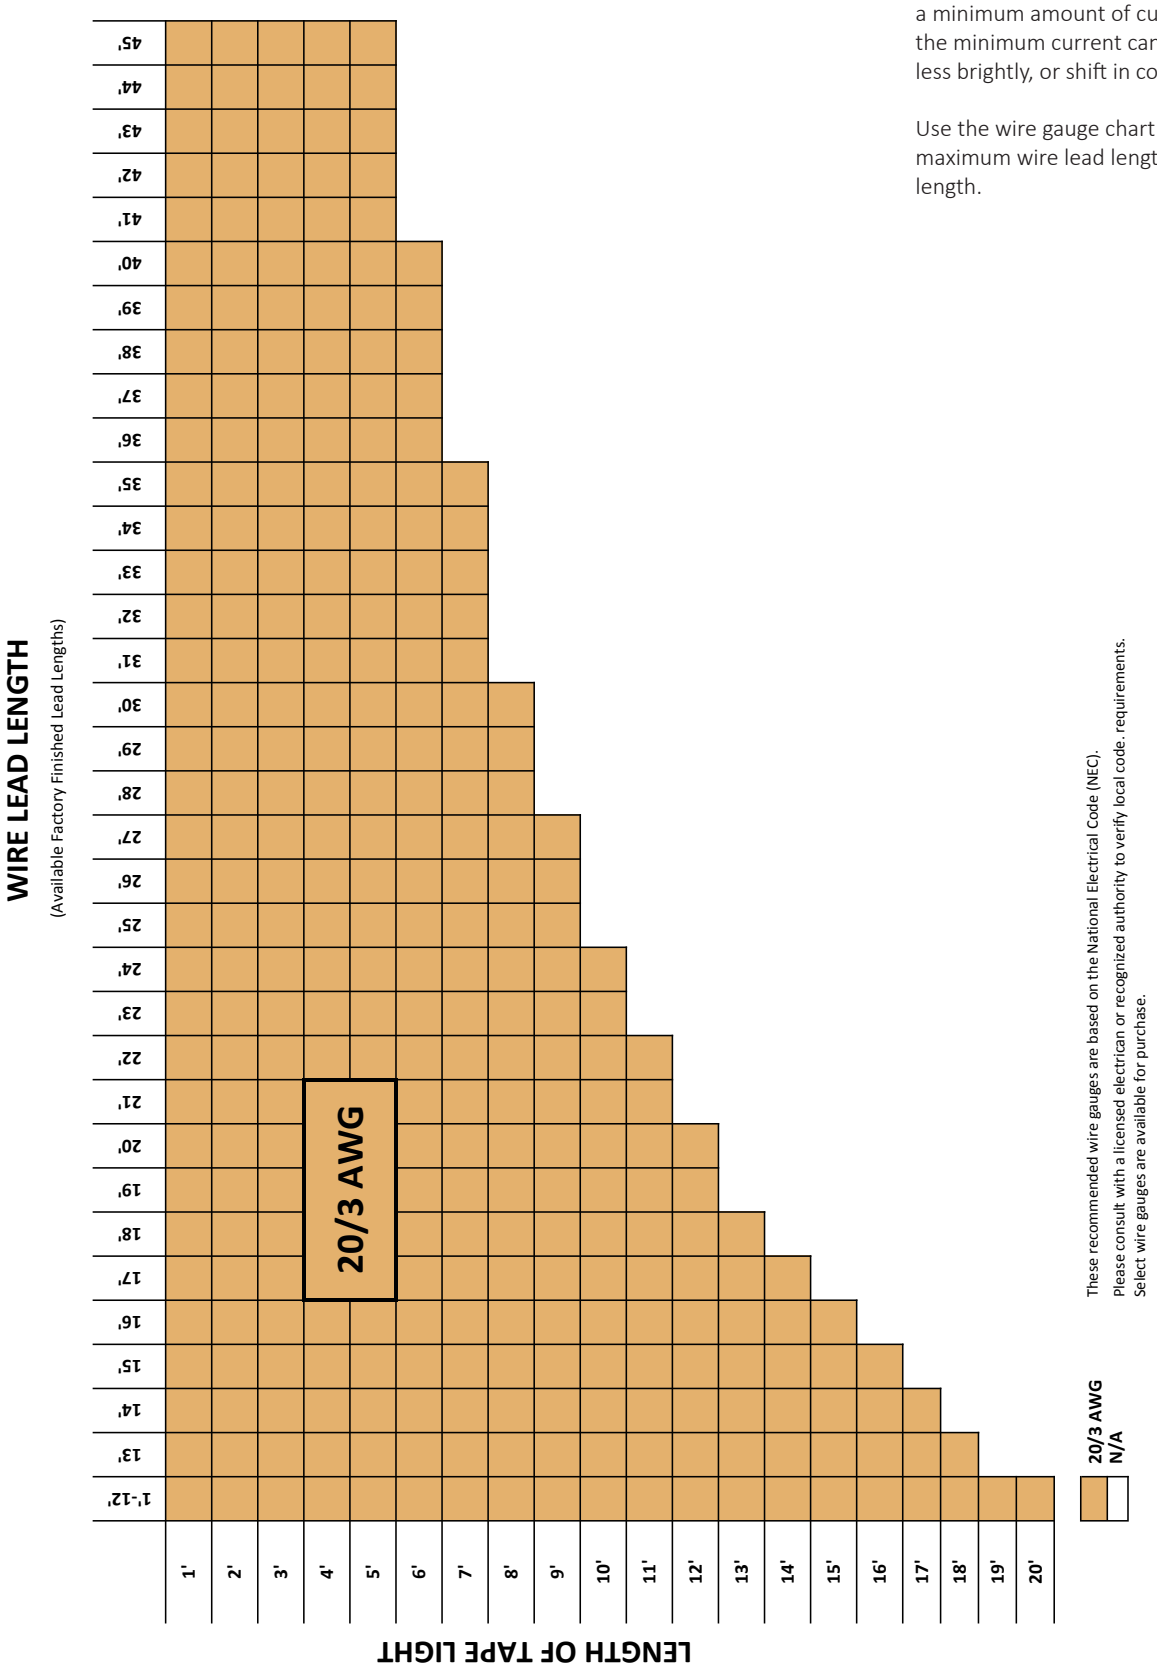
Typical orders ship within 5 business days. For large orders, call for lead time.

## K-RANGE 24™ 24V LED TAPE LIGHT



These recommended wire gauges are based on the National Electrical Code (NEC).
Please consult with a licensed electrican or recognized authority to verify local code. requirements.
Select wire gauges are available for purchase.

Voltage drop is the amount of voltage loss that occurs through a tape light due to impedance. LED lights requires a minimum amount of current to properly light; less than the minimum current can cause an LED to flicker, operate less brightly, or shift in color.

Use the wire gauge chart to the left to determine the maximum wire lead length for your custom tape light length.
